Video Assist / Media Manager Equipment List

Video Assist: HD Package w/ iPad Dailies:

This playback kit can take in any HD or SD signal. It records HD video and audio from the camera and can play the footage back instantly to any number of HD or SD monitors.

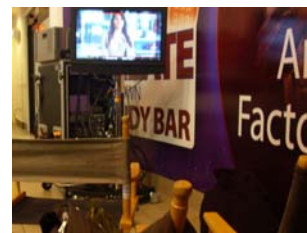

The kit also automatically downconverts the captured footage and shares the files to a iTunes library which is made available through a wireless network. This makes it possible for any authorized personnel with an iPhone, iPad or any other device with iTunes to review all of the day's footage without consulting with the VTR operator. These videos can also be uploaded to the internet in nearly real time.

The kit can also do live SD keying (to put a background on a greenscreen shoot) and edit footage on set.

The kit is compact, quick to set up and wheels around easily. It also includes a standalone DVD recorder so that DVD dailies can be provided to the client at the end of the shooting day.

HD Package w/ iPad Dailies:

- Control Stack Playback Hub:
 - 20 Space shock mount ATA case with Quadcore 8TB Workstation with Blackmagic Decklink Studio HD-SDI interface:
 - IN / OUT: HD-SDI, Component - HD, All SD inputs
